How to read them

Every figure on the preceding pages comes from the advertising account it describes, over the period that page names, and is published in the same form the client saw it. Where a case gives no figure for something, the account did not measure it — a gap is left as a gap rather than filled with an estimate.

These are advertising results. They are evidence of work done on comparable accounts and they are not a forecast: what an account does next depends on its market, its offer and its budget, and anyone who tells you otherwise before seeing it is guessing.

The hours and the job-success score on the cover are the public record on Upwork and can be checked there.
